

DURGA PRASAD THOTA

(716) 493-8516 | durgaprasadthotaa@gmail.com | Buffalo, NY

PROFESSIONAL SUMMARY

DevOps Engineer with 3 years of professional experience at Capgemini building and maintaining CI/CD pipelines using Jenkins, automating AWS cloud infrastructure through Terraform and Ansible, and managing containerized workloads with Docker and Kubernetes. Experienced in release management, incident management, root cause analysis, and environment provisioning across Linux, Windows, and AIX platforms. Skilled in Python, Bash, and PowerShell scripting with a strong foundation in DevSecOps principles, infrastructure as code, and Agile/Scrum delivery.

TECHNICAL SKILLS

CI/CD & Pipeline Tools: Jenkins, GitHub Actions, GitLab CI/CD, UrbanCode Deploy, ArgoCD, Continuous Integration, Continuous Deployment

Cloud Platforms: AWS (EC2, S3, IAM, Lambda, CloudWatch, VPC, Cost Explorer), GCP

Infrastructure as Code: Terraform, Ansible, AWS CloudFormation, Configuration Management, Environment Provisioning

Containers & Orchestration: Docker, Kubernetes (K8s), Helm, Container Orchestration, Auto-Scaling

Monitoring & Observability: Prometheus, Grafana, CloudWatch, Log Aggregation, Incident Management, Root Cause Analysis (RCA)

DevSecOps & Security: DevSecOps, IAM/RBAC, Vulnerability Scanning, Pipeline Hardening

Scripting & Programming: Python, Bash/Shell Scripting, PowerShell, Core Java, YAML, JSON

Version Control & OS: Git, GitHub, GitLab | Linux (RHEL/Ubuntu), Windows Server, AIX | MySQL, DB2

Methodologies: Agile, Scrum, Site Reliability Engineering (SRE), SDLC, CI/CD Best Practices

PROFESSIONAL EXPERIENCE

Associate DevOps Engineer II | Capgemini Technology Services

Jan 2024 – Jun 2024

- Built and maintained Jenkins CI/CD pipelines across dev, staging, and production environments, reducing release cycle time by ~30% through automated continuous integration and continuous deployment
- Scripted Python and Ansible automation for configuration management and environment provisioning on AWS and GCP, eliminating manual toil and preventing configuration drift
- Deployed and managed Docker and Kubernetes workloads with auto-scaling and zero-downtime releases; provisioned AWS infrastructure (EC2, S3, VPC, IAM) using Terraform IaC
- Executed end-to-end release management covering artifact versioning, Git branching, rollbacks, and smoke testing; enforced DevSecOps standards to harden the CI/CD pipeline
- Triaged incidents and led root cause analysis (RCA) by inspecting system logs, configuration files, and deployment artifacts across Linux, Windows, and AIX, reducing time-to-resolution
- Deployed Prometheus and Grafana dashboards with threshold-based alerting to detect pipeline anomalies, reducing mean time to resolution (MTTR) across infrastructure environments
- Aligned infrastructure automation and deployment schedules with development, QA, and operations teams through Agile/Scrum sprints to deliver stable, on-time releases

Associate Engineer – DevOps & Automation | Capgemini Technology Services

Jul 2021 – Dec 2023

- Integrated automated frameworks into Jenkins CI/CD pipelines, managing build triggers, stage configurations, and pipeline stability across dev and staging environments, reducing manual effort by ~40%
- Triaged pipeline and environment failures across Linux, Windows, and AIX by analyzing logs, configuration files, and deployment artifacts to identify and resolve root causes
- Managed hotfix deployments and post-deployment verification testing (PDVT) across development, QA, and operations teams, maintaining release stability and minimizing downtime
- Automated build, environment setup, and deployment workflows using Python and Shell scripting, reducing manual errors and improving pipeline reliability across multi-platform servers
- Produced deployment runbooks, CI/CD pipeline documentation, and troubleshooting guides adopted as the operational reference for build and release processes

PROJECTS

CI/CD Pipeline Automation

- Built a Jenkins and GitHub Actions CI/CD pipeline for a Python application, automating build, test, and deployment stages across dev and staging environments
- Provisioned AWS infrastructure (EC2, S3) via Terraform and containerized the application using Docker; managed deployment scripts to ensure consistent and repeatable releases

Cloud Cost Monitoring

- Wrote Python scripts against AWS CloudWatch and Cost Explorer APIs to query resource utilization and flag idle EC2 instances for cost review
- Integrated CloudWatch metrics into a Grafana dashboard to surface CPU, memory, and storage usage trends, improving infrastructure visibility and spend reporting

EDUCATION

Master of Science (M.S.) – Industrial Engineering

2024

University at Buffalo, State University of New York (SUNY) – Buffalo, NY
